1   Introduction

This Release Notes describes hardware and firmware requirements to use with the

QX3000 firmware 6.2.23 Date: August 23, 2018

Additional enhancements, bug fixes and known issues incorporated in this firmware will be listed as known.

Date: August 23, 2018

2 Requirements

2.1 Hardware Requirements

- The firmware (FW) can be used on QX3000 model only.
- The model name is shown on the front panel of the unit.

2.2 Firmware Requirements

Attention: The firmware upgrade to **6.2.23** can **ONLY** be done from 6.2.1 version.

2.3 Supported IP Phones

Listed below are the Epygi Supported IP phones with the corresponding software (firmware) versions that are tested and recommended for use with QX3000 FW 6.2.23.

Note:

- The **Auto Configuration** and **PnP** services are described in detail in the Configuring Epygi Supported IP Phones with QX IP PBXs guide.
- Any known issues and limitations regarding the usage of the QX3000 FW 6.2.23 telephony services and features for each IP phone described in detail in the QX IP PBX Features on Epygi Supported IP Phones guide.

Vendor	Model	SW/FW Version	PnP		Auto Configuration
			PnP (Multicast)	Assisted PnP (DHCP options 66/67)	
Akuvox	R15(P)	15.0.5.235	Yes	Yes	Yes

2.4 Interaction with Other Epygi Software Releases

Use the latest SW and FW versions for other Epygi products to achieve maximum compatibility with **QX3000 FW 6.2.23**:

- **QXE1T1**, **QXFXO4** and **QXISDN4** gateways used in the **Share** mode should have FW 6.2.23 or higher.
- **QXFXS24** should have FW 6.2.23 or higher for PnP configuration.
- **Auto Dialer** SW 1.0.11 or higher should be used.
- **Desktop Communication Console** (**DCC**) SW 1.18 or higher should be used.
- **iQall** (IOS application) version 1.1.0 and **iQall** (Android application) version 1.0.4 or higher should be used.
- **Epygi Hotel Console** (**EHC**) SW 1.0.7 or higher should be used.
- **Epygi Media Streamer** (**EMS**) SW 2.4 or higher should be used.
- **HotCall Add-In** SW 2.5 or higher should be used.
- **HotKeyCall** SW 1.14 or higher should be used.
- **Bulk User Extensions Importer** version 1.5 or higher should be used.
- **QX-Quadro Configuration Console** (**QCC**) SW 2.3 or higher should be used.
- **CallControl Pack** SW 5.8.0 or higher should be used.
- To use QX3000 with a **3PCC** or **Click2Dial** application, the **Allow 3pcc/Click2Dial Access** option should be enabled for each extension using this feature.

3 New Features

The table below indicates a high-level list of new features that have been added beginning with the most recent QX3000 FW release.

Release	New Features
6.2.23	
6.2.22	Added auto configuration support for the new **Cisco CP-6851**, **CP-7861** and **CP-8851** IP phones.
	Added PnP support for **Htek UC902, UC903, UC912G, UC912P, UC923, UC924, UC924E, UC926** and **UC926E** IP phones.
	Added auto configuration support for the new <u>iServ 8660 (8430/8630/8830)</u> Dect phone.
	Added support for the **Twilio** service as a new **SMS Gateway**. Use **Twilio** API for sending notifications via SMS.
	Added **P-Asserted Identity** (PAI) support for Polycom IP phones. The **PAI** option is configurable from **IP Phone Templates**. It is enabled by default.
	Added support for the <u>Use Session Progress</u> option instead of <u>Ringing</u> for the external calls.
	Added a new **Threshold to enter Master Mode** option on the **Redundancy Settings** page. This is an advanced configuration option and is related to **Backup** mode. This option allows to specify the time interval to wait before moving to **Master** mode. Default values of **Threshold to enter Master Mode** is 1. **Attention:** Please contact Epygi TSS before changing the value for this option.
	Enhancements in **EAC WEB application**: • Added new menu **Calls**, which is used to show the active calls addressed to the logged in agent. This **Calls** menu has the same functionality as the **Dashboard** menu in the QX FW versions bellow 6.2.23. • The **Dashboard** menu has been completely modified. For FW version 6.2.23 it shows various statistics and data for the selected Queue(s). This menu is available **only** when you are logged in as ACD Admin. • Added a new **Agent Tracing** report, which details agent activities regarding the status changes and calls for the selected agent(s), queue(s) and timeframe(s). • Added new values (**Every 2**, **3** and **4 minutes**) for the **Auto Reload Queue Statistics** option. • The **Settings** menu has been improved and updated.
6.2.18	Added support allowing to configure **MTU** size on LAN1 and VLAN interfaces.
	Added **P-Asserted Identity** (PAI) support for Mitel (Aastra) IP phones. The **PAI** option is configurable from **IP Phone Templates**. It is enabled by default.
6.2.11	Added auto configuration support for the new **Htek UC902, UC903, UC912G, UC912P, UC923, UC924E** and **UC926E** IP phones.
	Added **Htek UC46 (LCD)** expansion module support for **Htek UC924, UC924E, UC926** and **UC926E** IP phones.
	In the **Call Alert Settings** added a new **Leave a Voice Message** option, allowing to leave the actual message as a voice mail, available for playback on the defined extension(s).
	Added a new **Advertisement Interval** option in **Redundancy Settings** page which allows to specify the time interval between the advertisement packets that are being sent to the Backup device.

Release	New Features
	Added a new **Allow Concurrent Calls to Parent-Child Group** option, allowing to control handling of calls to **Parent-Child** group: • If selected, incoming calls continue ringing on available phones when one of the phones in **Parent-Child** group is busy or rejects the call. • If not selected, incoming calls will follow busy state rules (Busy Call Forwarding, Call Queue, VMS, etc.) depending on what is configured, if any of the phones in the **Parent-Child** group is busy. If all extensions in the **Parent-Child** group are free and are ringing, and any of them presses **Reject** button (or somehow else declines the incoming call), then the **entire group** will be considered as busy. Therefore, incoming call will follow busy state rules depending on what is configured. **Note:** If the **Call Waiting Service** is enabled on the **Parent** extension, then extensions of **Parent-Child** group will receive the second call.
	Added a new **Reset All** function in the **Multi-functional Programmable Keys** (MPKs) for IP phones, allowing to clean the MPKs configuration quickly for the selected IP line, IP Phone Template and Receptionist. **Note:** This option is not programmed to remove already configured MPKs from the IP Phone.
	Added new failover reason – **Other**. The system will use next matching routing pattern(s) in case of **Server Failure Responses** (5xx messages) and **Global Failure Response**s (6xx messages).
	Added possibility to access QX3000 WEB GUI using HTTP. Enter the following line http://xxx.xxx.xxx.xxx/unsecure in the address bar of the browser to access WEB GUI, where **xxx.xxx.xxx.xxx** is the IP address or hostname of the QX.
6.2.6	
	Added auto configuration support for the new Polycom **VVX 301/311** and **VVX 401/411** IP phones.
	Added **Phone Book** service support for Polycom phones.
	Added **Watching – Call Interception** support for Fanvil phones.
	Added support for **SNMP v3**.
	Added support for **TLSv1.1** and **TLSv1.2**.
	Security enhancements: Users will be redirected to HTTPS for the QX Login and Logout pages. This will allow to encrypt traffic between user's device (PC, smartphone, etc.) and the QX. **Note:** • Check and reconfigure **Port Forwarding** settings on the router, if the QX is located behind router to make sure that there is also Port Forwarding for HTTPS. • If you have already configured **Port Forwardings** to access the devices located on the QX LAN side, then check the entered address link to be with HTTP (instead of HTTPS) or reconfigure the Port Forwarding to HTTPS.
6.2.5	Added support in **EAC** to show the Agent Status Statistics, Queue Statistics in hourly/minutely basis, as well as to generate Reports for selected **Hours** and **Minutes**.
	Added a new **Deactivate** button on the **IP Lines** page allowing to change the status for selected group(s) of IP lines to inactive (free).
	Added a new **Use Epygi SIP Server** button on the **Conference Management** and **ACD Queues** pages to allow quick SIP registration of Conference extensions and ACD queues on Epygi SIP Server.
	Added a new **Billed Extension** column in the **Call History** pages to provide information about the extensions that are charged for the calls.
	Added support to provide QX users with e-mail, sms and event notifications in case of calls (emergency calls, etc.) completed through the respective call routing rules.
6.2.1	

4 Changed Features

The table below provides a high-level list of changed features that have been changed beginning with the most recent QX3000 FW release.

Release	Changed Features
6.2.23	
6.2.22	Major **Security** Enhancements.
	The recommended FW version has been changed for **Htek UC902, UC903, UC912G, UC912P, UC923, UC924, UC924E, UC926 and UC926E** phones from 2.0.4.4.33 to 2.0.4.4.41.
	GUI Enhancements for the following pages: • IP Lines, IP Lines Settings • SMS Settings • Extensions Management • ACD Management • NAT Traversal • VoIP Carrier Wizard
	The system **Music on Hold** (MOH) file will be used as default **Background Music** for ACD Queue custom prompts.
6.2.18	Major **Security** Enhancements
	The default **MTU** size for VLAN interfaces has been decreased from **1500** to **1432** bytes.
	The configured **SRTP policy** of PBX extension will be provided to the Yealink IP phones during configuration.
	The configured **DTMF parameters** of PBX extension will be provided to the IP phones during configuration.
6.2.11	The maximum length of **API ID** field for **Clickatell** SMS Gateway has been increased up to **128** symbols.
	The recommended FW version has been changed for some of supported **Htek** phones. For **UC924** and **UC926** from 2.0.4.2.24 to 2.0.4.4.33.
	GUI Enhancements for the following pages: • Admin Settings of the extensions (user, auto attendant, etc.) • User Settings of the extensions • Call History • Conference History
	Depending on the IP phone model, the **Use Session Timer** option will be enabled for the configured IP line.
	The default **Line Appearance** has been increased from **2** to **5** for each IP line.
6.2.6	**Network** and **Broadcast** IP addresses will not be included into **Usable Host IP Range**. These IPs will be reserved for network purposes.
6.2.5	The **Second LAN Interface Settings** have been moved from the hidden page to the **Network→Second LAN** page.
	The function of **Mixed** mode for **Recording Storage Settings** has been updated to keep the call recordings safe in case of FTP failure. Now this mode allows to send recordings to FTP server immediately together with keeping a copy in the local storage.
	The recommended FW version has been changed for **Yealink CP860** from 37.80.0.30 to 37.81.0.10.

Release	Changed Features
	The recommended FW version has been changed for some of the **Polycom** phones. For **Polycom SoundPoint IP 331, IP 335, IP 450, IP 550, IP 650, IP 670** from 3.3.5.0247 to 4.0.13.1445, for **SoundStation IP 5000** and **IP 6000** from 3.3.5.0247 to 4.0.13.1445, for **VVX 300/310, VVX 400/410, VVX 500** and **VVX 600** from 4.1.7.1210 to 5.7.0.11768, for **VVX 1500** from 3.3.5.0247 to 5.7.0.11768.
	The first programmable key on **Polycom** phones is reserved for the phone account.
	The **Call Quality Warning** in the System Events has been modernized to show information about the callee, caller and call date/time.
	GUI enhancements for **Call History** and **Conference History** pages.
	Redundancy feature has been redesigned to allow sending VRRP packets to unicast IP address (virtual IP) of slave device. **Note:** Having VRRP packets sent via unicast IP address will allow Redundancy feature to work in scenario when the master and backup devices are located in different places, meaning that there is router between master and backup.
6.2.1	

5 Fixed Issues

Issues fixed since version 6.2.22:

T: Title
D: Description

20328	T:	Using some special symbols in the admin GUI changed password may cause problem with accessing GUI management.
	D:	
20325	T:	The QX Security Diagnostics show nothing in the security reports regarding the admin's GUI and phone passwords weakness.
	D:	

6 Known Issues

T: Title
D: Description
C: Consequences
Fix: How to avoid the situation, or what to do in case the situation has occurred

20074	T:	Fanvil IP Phones have issue with firmware downgrade in general. Fanvil Phones stop working when downgrading the firmware, even if you downgrade to Epygi recommended version
	D:	
	C:	
	Fix:	Don't downgrade the firmware on Fanvil IP Phones. Will be fixed by in next version.
20065	T:	The custom LPs do not change the language for QX3000 WEB GUI.
	D:	
	C:	
	Fix:	Will be fixed in future release.
20036	T:	Sometimes the "Transfer Failed" notification is raised (shown) on Fanvil X6 display, though the transfer is successful
	D:	
	C:	No consequences, as actually the transfer (Blind and Consultative Transfer) is successfully completed.
	Fix:	Will be fixed in the next release.
20035	T:	Call disconnect in some calling scenarios with snom phones
	D:	In some calling scenarios, like picking up the parked call or using the local authentication in routing, the call might be disconnected if the call originator is a snom phone.
	C:	
	Fix:	Will be fixed in the next release.
19894	T:	Automatic "Daylight Saving Time" doesn't work on Fanvil IP phones
	D:	
	C:	
	Fix:	Workaround: Create an IP Phone Template for Fanvil phones, select the **manual** option for **Daylight Saving Time**. Attach this template to the IP lines for Fanvil phones. Will be fixed in future release by Fanvil.
19805	T:	The BLF indication (for programmable keys) on snom phones is switched off after the subscription timeout expires, regardless of the actual state of the BLF event
	D:	The issue appears on snom **3xx** and **8xx** series running **8.7.5.35** firmware version.
	C:	
	Fix:	Workaround: The issue is solved in snom 8.7.5.44 beta firmware.
19463	T:	3-way conference doesn't work on Grandstream GXP1100 and GXP1105 IP phones in a specific scenario
	D:	3-way call conference cannot be established on Grandstream GXP1100 or GXP1105 phones when they receive a call.
	C:	
	Fix:	Workaround: Login into WEB GUI of the phone and assign 3-way conference key as a MPK. Use this key to initiate 3-way call conference when the phone is already in the active call. Will be fixed in future release.

19446	T:	After changing QX3000 LAN IP configuration, the phones configured from LAN side lose registration
	D:	After changing QX3000 LAN IP configuration (changing the network part of the IP address) the system doesn't reboot phones automatically.
	C:	IP phones lost registration.
	Fix:	Workaround: Reboot phones manually. Will be fixed in future release.
18839	T:	It's not possible to park a call twice to the same call park extension by using programmable key on Yealink T32G and T38G
	D:	Upon successful call park/pick up the second attempt to park the call, using the park ext. programmable key fails. The problem is happening only if you park the call to the same park extension (by pressing Call Park key).
	C:	
	Fix:	Workaround: Park the call to different call park extension.
18549	T:	Could not dial out (*1) or use any other moderator feature while welcome message file has been playing
	D:	Could not dial out (*1) or use other moderator features while welcome message file has been playing. You should listen to the whole welcome message file first, after that use moderator features. It is recommended to keep the welcome message to a short duration.
	C:	
	Fix:	Will be fixed in future release.
18548	T:	Part of conference recording is lost after recording pause/resume
	D:	When pausing the conference recording and then resuming it again, the final recording contains only the part after resuming.
	C:	
	Fix:	Will be fixed in future release.
17404	T:	Calls which are done using Call Relay (*2) on the auto attendant are not shown in Call History
	D:	Only the call to attendant is shown in the call history. The call leg after call relay is missing in the call history in case if the external caller is terminating the call first.
	C:	
	Fix:	Workaround: Use feature code *1 instead of *2 for call relay. Will be fixed in future release.
16683	T:	Find Me / Follow Me does not work for incoming Secure RTP call
	D:	Though the call came with SRTP option the FM/FM is making unsecure calls.
	C:	As a result, the call is not established.
	Fix:	Will be fixed in future release.
16635	T:	Shared Mailbox watching does not work when using "Allow access to Shared Mailbox for enabled extensions" option in Many Extension Ringing configuration
	D:	Extension has Many Extension Ringing enabled with a few extensions configured for Shared Mailbox.
	C:	However, in the IP Line settings, the Shared VMail Ext. xxx option is not listed in the drop-down list on IP Lines→MPK page.
	Fix:	Workaround: Use the Shared Mailbox: Edit Voice Mailbox Access List link in the Voice Mailbox Settings for extension. Will be fixed in future release.

16533	T:	**A problem with incoming Secure RTP call in a specific scenario**
	D:	When incoming Secure RTP call is connecting to the destination via Call Routing table, QX3000 always tries to connect it as an unsecure call and the call is being dropped due to the media parameters incompatibility.
	C:	
	Fix:	Will be fixed in future release.
15942	T:	**It is not possible to pick up (via pickup group) the call to extension with FM/FM enabled**
	D:	
	C:	
	Fix:	Will be fixed in the next releases.

7 General Hints

7.1 Firmware Installation and Update

The steps below describe shortly the QX3000 manual installation procedure used to install the firmware from scratch. This would be used to install version 6.2.1 or for **Emergency Recovery** of a system. This procedure will result in a system that is at factory defaults. Please refer to <u>System Recovery Procedure for QX3000</u> document for more details.

1. Turn on the PC.
2. Insert CD/DVD disk including installation program to the DVD ROM.
3. Restart (reset) the PC.
4. Installation will start automatically after PC reboot. After the successful installation, the PC will automatically shut down (this may take from 10-15 minutes). The beep sound will indicate that the installation successfully completed.
5. Turn on the PC and quickly remove the installation CD/DVD disk from the DVD ROM.

Attention: It is recommended to back up the configuration for **emergency purposes** prior to upgrading the firmware. You can do that from **Maintenance→Backup/Restore→Backup and download current Configuration** page. The current configuration will remain after the firmware update. Moreover, the locally saved voice mails and call recordings, all custom messages and call history will be saved during the upgrade.

To perform the manual firmware update:

1. Go to the **Maintenance→Firmware→Manual Firmware Update** page.
2. Click the **Download Configuration** link to back up the current configuration (recommended).
3. Click the **Choose File** button to browse for **image.bin** file.
4. Click **Save** to start uploading the file.
5. Click **Yes** to proceed the firmware upgrade.

Note: The update process takes about **5** minutes. Normal operation will be stopped during that time.

7.2 Limitations and Restrictions

- The **Network Capture** size is limited to **24** MB. This will put a limitation on the duration of captured file.
- The **Call Capture** duration is limited to **160** seconds.
- The capture duration is limited to **160** seconds in **DSP Capture** hidden page.
- In case if **Voice Mail Recording Codec** is other than **PCMU**, the maximum length of voice message sent by email is limited to **5** minutes.
- The **Voice Mailbox** size is limited to **500** voice mails for each extension.
