1   Introduction

This Release Note describes hardware and software requirements to use with the

Epygi IP PBX's Resource Calculator software 6.0.2 Date: April 7, 2015

Additional enhancements, bug fixes and known issues incorporated in this software will be listed as known.

Date: April 7, 2015

2 Requirements

Epygi IP PBX Resource Calculator is a MS Windows application that displays the number of fixed and configurable parameters (FXO, FXS, IP phones, total virtual extensions, etc.) of a certain Epygi IP PBX model selected from the **Product Type** drop down list.

To use the **Epygi IP PBX Resource Calculator** simply run the application and then select the desired Epygi IP PBX model to see all values corresponding to that IP PBX. It is also possible to change any value from any drop down list to see correlated changes of the other parameters on the same IP PBX.

2.1 System Requirements

The following specifications are required for the operation of the **Epygi Resource Calculator**:

Host operating system

- Windows 7
- Windows XP or Windows Vista

3 New Features History

The table below indicates a high–level list of new features that have been added beginning with the most recent **Epygi Resource Calculator** SW release.

Release	New Features
6.0.2	Added support for QXISDN4+.
6.0.1	Added support for QX IP PBX's.
5.3.3
