

## **Yealink SIP IP Phones Release Note of Version 70**

**Firmware Version : From x.61.0.80 To x.70.0.120**

**Applicable Models : SIP- T20/T22/T26/T28**

**Release Date : January 3<sup>th</sup>, 2013**

## 1. New features

1. Added new mechanism of Auto Provisioning feature.
2. Added automatic BLF list configuration feature on DSS key.
3. Added one sharedline account supports multiple calls feature.
4. Added Call Pickup soft key feature.
5. Added “Visual Alert for BLF Pickup” and “Audio Alert for BLF Pickup” configuration.
6. Added the prompt interface for “Action URI” feature.
7. Supported to show the hardware version and firmware version of the EHS and EXP device in the Status page.
8. Added “Play local DTMF Tone” configuration.
9. Added “DHCP Active” configuration.
10. Added “HeadSet Key In Talk” configuration
11. Added “Phone Unlock PIN” on LCD.
12. Added Mac address info to User-Agent header on SIP message.

## 2. Optimization

1. Supported to enter the Voicemail box by pressing the Message button when then Menu key is locked.
2. Added the “Transfer Mode via DSS Key” configuration.
3. Classified the configurations in the Phone→Features web setting page.
4. Supported DND & FWD separated feature.
5. Optimized keypad lock feature.
6. Supported TAP mode of OpenVPN.
7. Added the OpenVPN feature to T20/T22 models.
8. Modified ATS conference feature to be Optional.
9. Modified Draft BLA feature to be Optional.
10. Added PEAP-MSCHAPV2 authentication for 802.1X feature.
11. Added EAP-TLS authentication for 802.1X feature.
12. Added domain name supported for PushXML server address.
13. Optimized “Logo + character HD” icon display in the LCD of T28/T26 when calling with codec G722.
14. Did optimization of dealing with BLF Notify message which is out of dialog.
15. Did optimization of ringtone.
16. Default Input Method of the Broadsoft network phonebook.
17. Added some fields to the snmp section.
18. Added the feature that the phone can use the SNMP to reboot the phone.
19. Added the dual-headset function.
20. Added new parameters to Action URL feature.
21. Added “Voice Mail Tone “configuration.
22. Optimized XML browse.
23. Added “Allow IP Call “configuration.

## 4. Description to the new added features

### 1. Added new mechanism of Auto Provisioning feature.

**Detail :** For more details please refer to Yealink Auto Provision User Guide.pdf

### 2. Added automatic BLF list configuration feature on DSS key.

**Description :** After configuring BLF list URI on one account, corresponding BLF list will be configured automatically on available DSS key in order.

**Detail:** For more details please refer to Yealink SIP-T2xP User Guide.pdf.

### 3. Added one shared line account supports multiple calls feature.

**Path:** Account -> Advanced page.

BLF List Code	<input type="text"/>	?
BLFListBargeInCode	<input type="text"/>	?
Shared Line	Broadsoft SCA	?
Dialog-Info Call Pickup	Disabled	?
BLA Number	<input type="text"/>	?

**Description :** There is no need to do the configuration in the DSS Key interface, it just need to select the Broadsoft SCA option in the drop-down menu of shared line parameter.

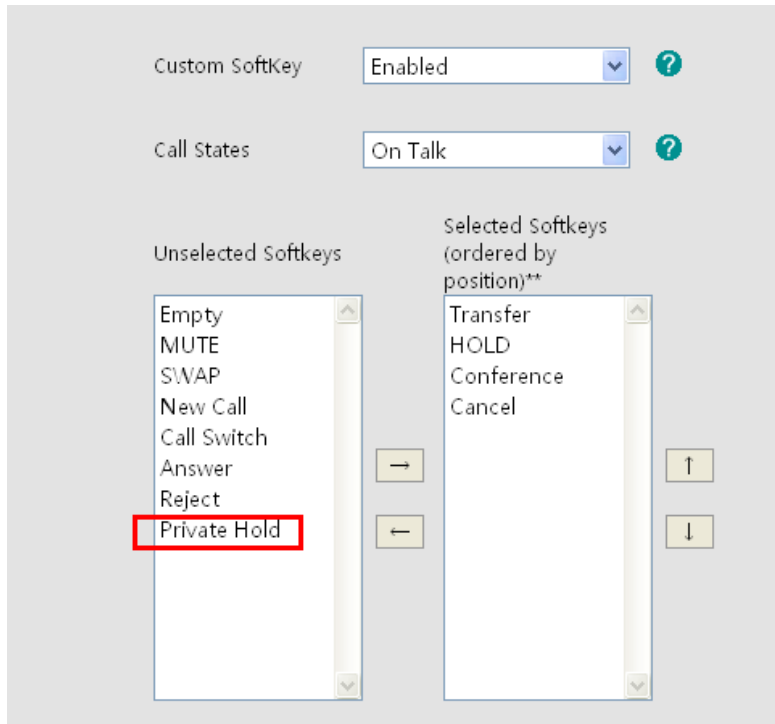

There is difference between the symbol of SCA account and normal account on the idle interface.

Long press the LineKey/DssKey for 1s to show the call list of the SCA account.

Add the PriHold soft key on the talking interface of the SCA account.

The display of the PriHold soft key on the talking interface of SCA account :

**Detail :** For more details please refer to the introduction of SCA in Yealink SIP-T2xP User Guide.pdf.

#### 4. Added Call Pickup soft key feature

**Path :** Phone→Softkey Layout

**Description :** Support the customer set soft key as all Pickup in the soft key layout of dialing interface.

The display of Call Pickup soft key on LCD :

**Detail :**For more details please refer to the introduction of Call Pick in Yealink SIP-T2xP User Guide.pdf

**5. Added “Visual Alert for BLF Pickup” and “Audio Alert for BLF Pickup” configuration.**

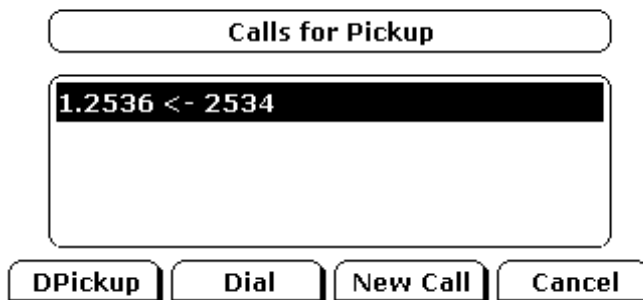

**Pate:** Phone→Feature→Call Pickup

**Call Pickup >>**

Direct Call Pickup	Enabled
Direct Call Pickup Code	<input type="text"/>
Group Call Pickup	Enabled
Group Call Pickup Code	<input type="text"/>
Visual Alert for BLF Pickup	Disabled
Audio Alert for BLF Pickup	Disabled

**Description :**

**Visual for “BLF +Pick code “:** when set the “BLF +Pick code “, when a call comes to the monitored number, a Visual will show on LCD as below

**BLF pickup tone:** when set the ‘BLF + pickup code’, it will have an audio like ‘du’ when a call comes to the monitored number. The default value of this parameter is ‘disable’.

**Detail:** For more details, please refer to the introduction of Busy Lamp Field (BLF) in Yealink SIP-T2xP User Guide.pdf.

**6. Added the prompt interface for “Action URI” feature**

**Path :** Phone→Feature→API Security→Trusted Action URI Server List

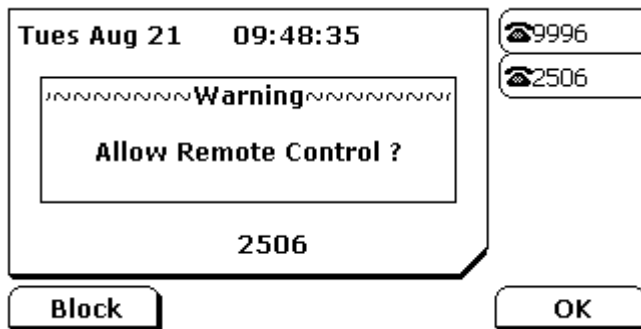

**API Security >>**

Push XML Server IP	<input type="text"/>	
XML SIP Notify	Disabled	
Trusted Action URI Server List	10.3.5.47	

**Description :** Trusted Action URI Server List, When you active the Action URI function(fill in a IP address), if the phone received a remote control command of Action URI , it will pop up a prompt interface first, and customers can choose to accept or reject it(the similar scenario like remote assistance).

The prompt interface on LCD:

**The format of the IP address :**

- 1 ) Support one or more Discontinuous IP address, separated with a comma.  
For example, when you fill in the IP like “10.1.3.66,192.168.1.20”, at this time, only the person using the IP address of 10.1.3.66 or 192.168.1.20 can remote control the phone with Active URI.
- 2 ) Support a continuous IP section, use the format like ‘\*.\*.\*.\*’ to design the IP section that can access to the phone. The range of ‘\*’ is 0~255  
For example  
10.1.3.\* means the IP section of 10.1.3.0 ~ 10.1.3.255  
  
10.1.\*.\* means the IP section of 10.1.0.0 ~ 10.1.255.255
- 3 ) The default value of Trusted Action URI Server List is empty, that means prohibit all the remote control of the phone.

**7. Supported to show the hardware version and firmware version of the EHS and EXP device in the Status page.**

**Path:** Status →EXP (it will display only when the EHS or EXP device is connected)

<b>EXP ?</b>	
EXP39 1 Hard Version	32.0.0.0
EXP39 1 Soft Version	5.16.0.0

**Description :**

When EXP38/39 or EHS36 is connected, phone will show the hardware version and firmware version of them in the status interface of the phone web GUI.  
When EXP38/39 or EHS36 is disconnected, phone will refresh the phone web GUI, the information of the EXP and EHS will disappear.

**Firmware information :**

Type	Hardware Version	Old Firmware Version	Newest Firmware Version
EHS36	48.0.0.0	0.16.0.0	1.16.0.0

EXP39	32.0.0.0	4.16.0.0	5.16.0.0
EXP38	16.0.0.0	4.17.0.0	5.17.0.0

**8. Added “Play local DTMF Tone” configuration**

**Path** : Phone→Feature→Audio Settings

**Audio Settings >>**

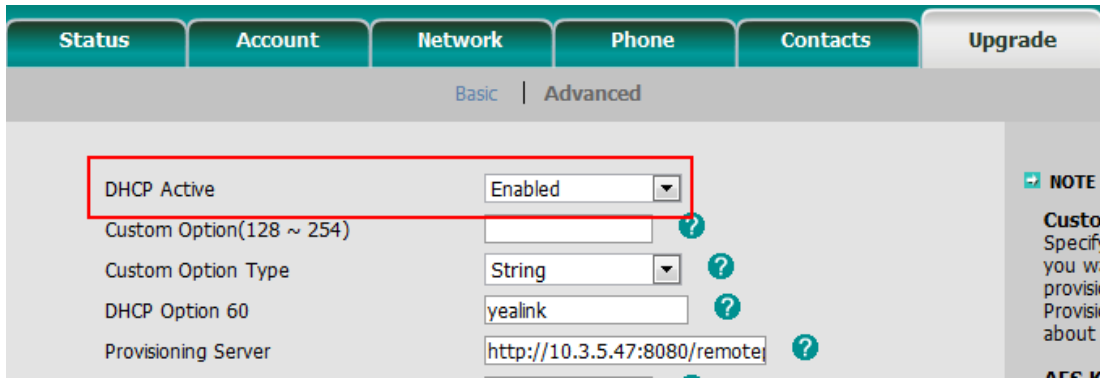

Call Waiting Tone	Enabled	?
Play Hold Tone	Enabled	
Play Hold Tone Delay	30	
Key Tone	Enabled	?
Send Tone	Enabled	?
Redial Tone		?
Headset Send Volume (1~53)	30	?
Handset Send Volume (1~53)	25	
Handfree Send Volume (1~53)	35	
Ringer Device for Headset	Use Speaker	?
Dual Headset	Disabled	
Headset Prior	Disabled	
Send Pound Key	Disabled	
<b>Play Local DTMF Tone</b>	<b>Enabled</b>	

**Description :**

When set to Enabled, the user can hear the DTMF Tone when pressing the DTMF during a call, when set to Disabled, the user can't hear the DTMF Tone when pressing the DTMF during a call.

**9. Added “DHCP Active” configuration.**

**Path** : Upgrade→Advanced

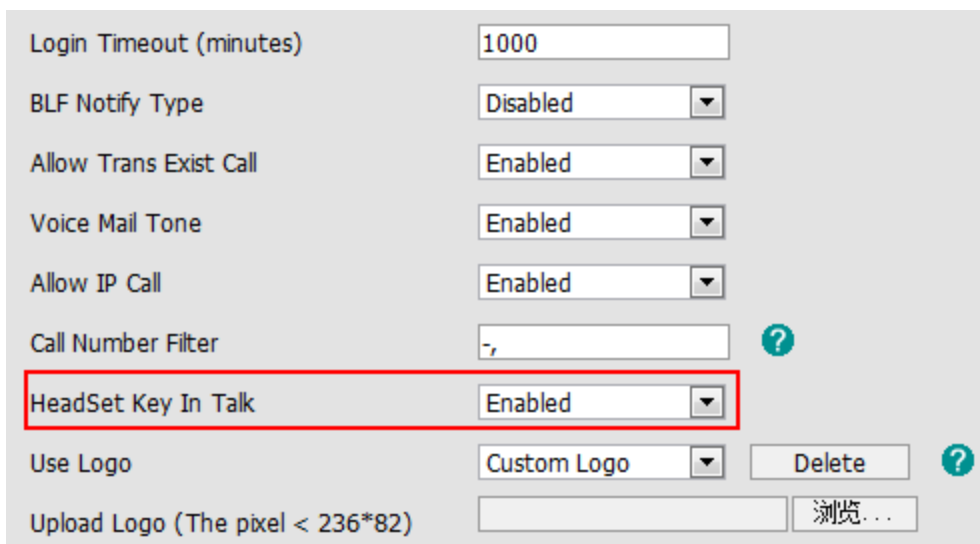

**Description :**

If this option is enabled, it means phone can get the Auto Provisioning URL by DHCP Option value .If it is disabled, phone can't get the Auto Provisioning URL by DHCP Option value.

**10. Added “HeadSet Key In Talk” configuration**

**Path : Phone->Features->General**

**Description :**

When set HeadSet Key In Talk to Disable,  
If phone is in HeadSet mode, at this time there will be no response when the user press the Speaker or pick up the handset.  
If phone is not in HeadSet mode, then the user press the Headset button to enter the HeadSet mode, at this time, there will be no response when the user press the Speaker or pick up the handset.  
When set HeadSet Key in Talk to enabled, the phone will work normally.

**11. Added “Phone Unlock PIN” on LCD.**

**Path : Menu->Setting->Basic Setting->Phone Unlock PIN**

The image shows two sequential screens from a Yealink phone's menu. The first screen is titled 'Basic Settings' and contains a list of options: '1. Language', '2. Time & Date', '3. Ring Tones', and '4. Phone Unlock PIN'. The '4. Phone Unlock PIN' option is highlighted with a black background. Below this list are two buttons: 'Back' and 'Enter'. The second screen is titled 'Change PIN' and contains three prompts: '1. Current PIN:', '2. New PIN:', and '3. Confirm PIN:'. The '1. Current PIN:' prompt is highlighted with a black background. Below these prompts are four buttons: 'Back', '123', 'Del', and 'Save'.

**Description :** it can be used to configure the unlock PIN on LCD. And the default value of the PIN is '123'.

**Detail :** For more details, please refer to the introduction of the Phone unlock PIN in Yealink SIP-T2xP User Guide.pdf

## 12. Added Mac address info to User-Agent header on SIP message.

### **Description :**

This feature is configurable only by Auto Provisioning, it is defaulted to be disable.

Enable this Feature:

Set 'network.sip.tag\_mac\_to\_ua.enable = 1' in your configure files.

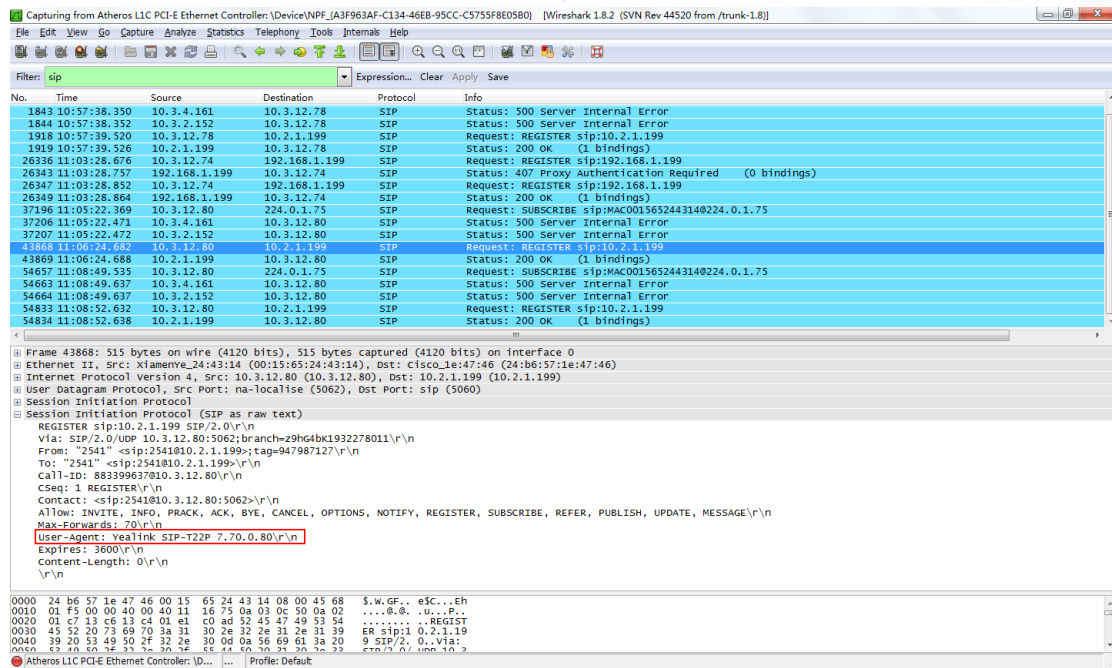

And the MAC address will show in the User-Agent header.

Disable this Feature :

Set 'network.sip.tag\_mac\_to\_ua.enable = 0' in your configure files.

And the MAC address won't show in the User-Agent header.

Detail : For more details please refer to Yealink Auto Provision User Guide.pdf

## 5. Optimization description

1. Supported to enter the Voicemail box by pressing the Message button when then Menu key is locked.
2. Added the “Transfer Mode via DSS key” configuration.

**Path : Phone-> Features->Transfer Settings→Transfer Mode via DSS Key**

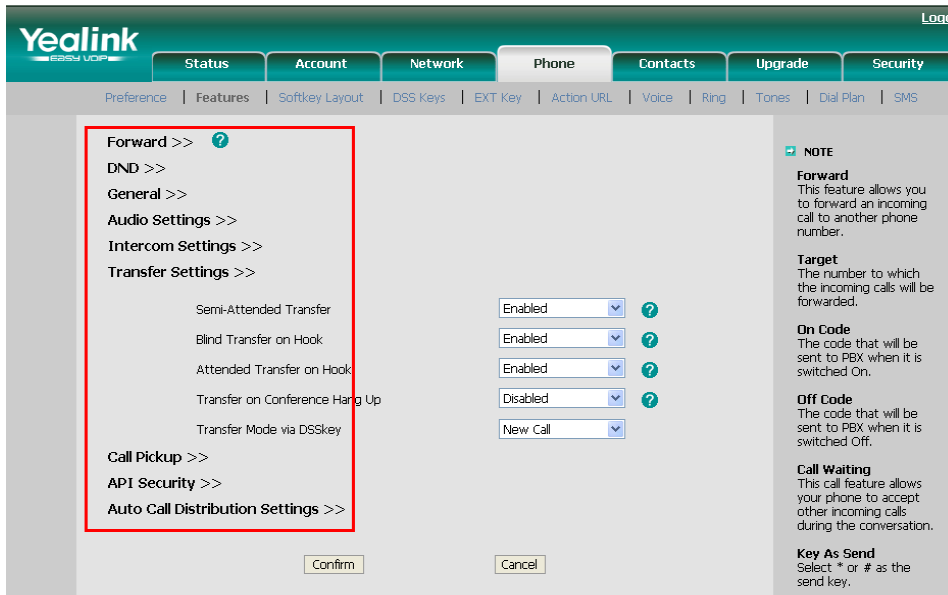

### Description :

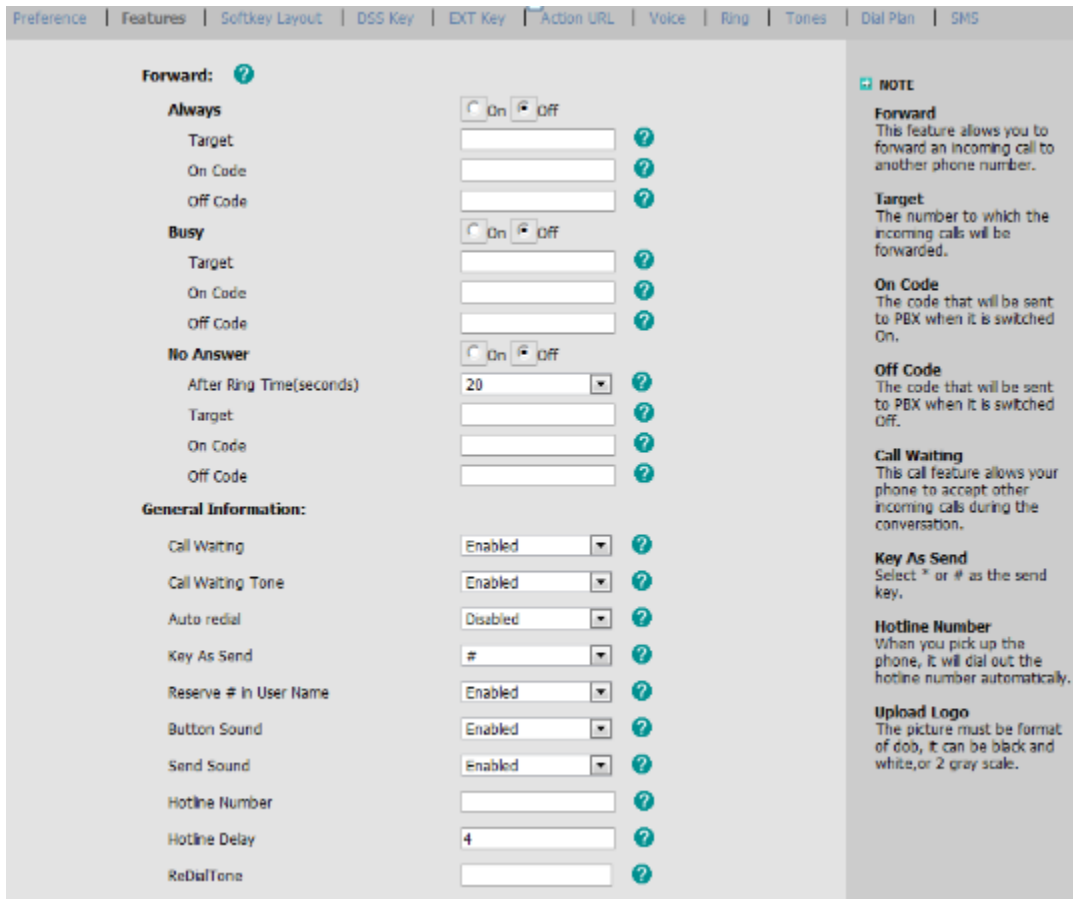

- (1) When DSS Key is set to BLF , BLF List , Speed Dial , Transfer, if “Transfer Mode via DSS Key” is set to “Blind Transfer” ,phone will make blind transfer when pressing this DSS Key during an active call
- (2) When DSS Key is set to BLF , BLF List , Speed Dial , Transfer, if “Transfer Mode via DSS Key” is set to “Attended Transfer” ,phone will make attended transfer when pressing this DSS Key during an active call
- (3) When DSS Key is set to BLF , BLF List , Speed Dial , Transfer, if “Transfer Mode via DSS Key” is set to “New Call” ,phone will make a new call when pressing this DSS Key during an active call

3. Classified the configurations in the Phone→Features web setting page.

**Path : Phone-> Features**

The Web frame structure of V61 version:

#### 4. Supported DND & FWD separated feature.

Path: Phone-> Features->Forward/DND

Forward >> ?

Call Forward Key Mode:  Phone  Custom

Account	Call Forward	Status	Target	Time Out	On Code	Off Code
0.Phone	Always	<input type="checkbox"/>	<input type="text"/>		<input type="text"/>	<input type="text"/>
	Busy	<input type="checkbox"/>	<input type="text"/>		<input type="text"/>	<input type="text"/>
	No Answer	<input type="checkbox"/>	<input type="text"/>	12 <input type="text"/>	<input type="text"/>	<input type="text"/>

DND >>  
General >>

Forward >> ?

DND >>

DND Key Mode:  Phone  Custom

Account	DND	On Code	Off Code
0.Phone	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>

General >>  
Audio Settings >>

**Description :**

When the “mode” is set to “Phone”, DND&FWD configuration will effect on all accounts  
When the “mode” is set to “Custom”, DND&FWD can be controlled separately by account.

**Detail :** For more details, please refer to the introduction of the DND and FORWARD feature in Yealink SIP-T2xP User Guide.pdf

**5. Optimized keypad lock feature**

**Path : Phone-> Preference**

Keypad Lock	Menu Key <input type="text"/> ?
Phone-Unlock PIN(0~15 digital)	●●●●●●
Phone Lock Time Out(0~3600s)	0
Emergency	112,911,110

**Detail :** For more details, please refer to the introduction of Keypad Lock feature in Yealink SIP-T2xP User Guide.pdf

**6. Supported TAP mode of OpenVPN.**

- 1 ) dev-TUN mode, works in network layer , already supported in T2X V61.
- 2 ) dev-TAP mode, works in data link layer, support severaOpen VPN connection.

**7. Added the OpenVPN feature toT20/T22 models.**

**8. Modified ATS conference feature to be Optional.**

**Description:** Deleted ATS conference feature, not support in the neutral version, but set as a customer special feature.

**9. Modified Draft BLA feature to be Optional.**

**Description:** Deleted Draft BLA feature, not support in the neutral version, but set as a customer special feature.

**10. Added PEAP-MSCHAPV2 authentication for 802.1X feature.**

- 1 ) Add PEAP-MSCHAPV2 option on LCD, path: Advanced->Network->802.1X Setting

- 2 ) Add PEAP-MSCHAPV2 authentication option and upload certificate option in Network->Advanced->802.1X webpage (certificate should be uploaded through webpage).
- 3 ) network.802\_1x.root\_cert\_url = (upload the root certificate of 802.1x)
- 4 ) network.802\_1x.root\_cert\_file\_name = (save the name of 802.1X CA certificate)

**11. Added EAP-TLS authentication for 802.1X feature.**

- 1) Add EAP-TLS option on LCD, path: Advanced->Network->802.1X Setting

- 2) Add EAP-TLS authentication option and upload certificate option in Network->Advanced->802.1X webpage (certificate should be uploaded through webpage).
- 3) network.802\_1x.client\_cert\_url = (upload the client certificate of 802.1x)
- 4) network.802\_1x.client\_cert\_file\_name = ( save the device certificate of 802.1x )

## 12. Added domain name supported for PushXML server address.

### Description :

When fill in the domain name to the push XML server IP, www.xmyealink.com for example, the phone will analysis correctly to the domain and after get the result, it will receive the correct XML information from the corresponding IP address.

## 13. Optimized “Logo + character HD ”icon display in the LCD of T28/T26 when calling with codec G722.

When T28 call T26 with the codec G722, both of T28 and T26 will display “Logo + character HD ” in the lower right corner of LCD.

## 14. Did optimization of dealing with BLF Notify message which is out of dialog.

**Description :**

Normally, the phone only deal with BLF Notify message which matched with subscribe message. But the BLF Notify message from some server doesn't match with subscribe message.

When you enable "Out Dialog BLF" option, the phone can deal with such BLF Notify message which is out of Dialog.

**Path : Account →Advanced**

Conference URI	<input type="text"/>	?
ACD Subscription Period(120~3600)	<input type="text" value="3600"/>	?
Caller ID Header	FROM <input type="text"/>	?
Early Media	Disabled <input type="text"/>	?
SIP Server Type	Default <input type="text"/>	
Music on Hold Server	<input type="text"/>	
Distinctive Ring Tones	Enabled <input type="text"/>	
Unregister after Reboot	Disabled <input type="text"/>	
Out Dialog BLF	Disabled <input type="text"/>	

**15. Did optimization of ringtone.**

**Description :**

Old ringtone is not standard,

Optimized five standard ringtones

- 1) Ring2S then stop for 4S then repeat.
- 2) Ring400ms then stop for 200ms then ring 400ms then stop2000ms then repeat.(For incoming call from external)
- 3) Ring 400ms then stop for 200ms then ring 400ms then stop2000ms then repeat. (For incoming call from internal)
- 4) Ring 500ms then stop for7500ms then repeat.

**16. Default Input Method of the Broadsoft network phonebook.**

**Description:** Default Input Method of the Broadsoft network phonebook to ABC

**17. Added some fields to the snmp section.**

**Description:** Added some fields to the snmp section ,for example, community , sysContact .

**18. Added the feature that the phone can use the SNMP to reboot the phone.**

**19. Added the dual-headset function.**

**20. Added new parameters to Action URL feature.**

**Description:** New parameters added to Action URL feature are showing below  
AnswerNewIncomingCall, RejectIncomingCall, TransferFinished ,TransferFailed,  
ForwardIncomingCall

**21. Added “Voice Mail Tone “configuration**

**Path: Phone -> Feature ->General**

**Description:**

When the “Voice Mail Tone” is set to enable, phone will play the voice mail tone when received a voice mail.

When the “Voice Mail Tone” is set to disable, phone will not play the voice mail tone when received a voice mail.

**22. Optimized XML browse.**

**Description:** Optimized XML browse that it can support hot desking feature.

**23. Added “Allow IP Call “configuration.**

**Path: Phone -> Feature -> General**

**Description:**

When “Allow IP Call” is set to enable, the user can make an IP call.

When “Allow IP Call” is set to disable, the user can’t make an IP call.

**24. Did optimization that the phone can disable the local DTMF Tone.**

**25. Did optimization that the phone can support 99 entries for Dial-now Rule.**

**26. Did optimization of the LDAP search interface, show the default IME when enter this interface and the IME can be configured.**

**Description:**

When enter the LDAP interface through the DSSKEY, it will show the IME immediately, and this IME is the one you used last time.

When doing LDAP search in the Dial/PreDia interface, the default IME can be configured by the configure file.

**Feature effect.**

1. When enter the LDAP interface through the DSSKEY, it will show the IME immediately, and this IME is the one you used last time.
2. When doing LDAP search in the Dial/PreDia interface, the default IME only can be configured by Auto Provision, and it is decided by the parameter 'IMEType=X'  
X= 0 means 2ab  
X= 1 means 123  
X= 2 means abc  
X= 3 means ABC

**27. Did optimization of DHCP, supported to get NTP server address through Option 42.****Description:**

When this feature is enabled, once the phone boot up and get IP address through DHCP, the phone will get the NTP server address at the same time from the DHCP message that send from DHCP server. And fill in the NTP server info to the NTP server address bar, and get the time info through NTP server.

**Note:** Before you use this feature, please enable the getting time through DHCP feature and the NTP serve address must be an IP address.

**Detail:** For more details please refer to Yealink SIP-T2xP User Guide.pdf.

**28. Did optimization that the Direct IP Call feature can be configured through Auto Provisioning.****Description:**

The Direct IP Call feature can be enabled or disabled through Auto Provisioning.

Enable Direct IP Call:

Set 'sip\_ip\_call.enable=1' in your configure files. Then you can make a Direct IP Call.

Disable Direct IP Call:

Set 'sip\_ip\_call.enable=0' in your configure files. Then you can't make a Direct IP Call.

**Detail :** For more details please refer to Yealink Auto Provision User Guide.pdf
